Senior Software Engineer · Distributed Systems & Cloud-Native Infrastructure · CNCF Open Source Contributor

EXPERIENCE

Software Engineer 3 (Senior IC)

Jan. 2022 – Present

Avesha Systems

Bangalore, India

- Active CNCF community collaborator and LFX Mentor for KubeSlice — driving external contributor onboarding, community growth, and ecosystem engagement.
- Led open-sourcing of **KubeSlice** to CNCF Sandbox — architected multi-cluster Kubernetes networking platform with NSM-based overlay networking, custom CNI integration, Kubernetes Operators (CRDs + controllers), and certificate-based mutual auth (AES-256-GCM).
- Built **EGS (Elastic GPU Service)** — SaaS platform for intelligent GPU allocation to LLM workloads, provisioning inference endpoints by dynamically procuring GPU nodes; real-time GPU utilisation monitoring for NVIDIA and AMD GPUs.
- Designed **Smart Scaler** — predictive autoscaling platform delivering 20–70% cloud cost reduction across multi-cloud customer deployments using workload-aware scaling algorithms.
- Built **Smart Traffic Director** — custom Kubernetes operator for DNS-based traffic steering across heterogeneous multi-cloud environments, ensuring low-latency routing and high availability.

Software Engineer 2

Mar. 2021 – Dec. 2021

Citrix R&D

Bangalore, India

- Designed and owned a high-throughput event-processing microservice handling ~1,000,000 events per application, with actionable insights generated under 30 minutes end-to-end.
- Led full application lifecycle — software design and architecture through testing, support, and documentation — for a highly distributed, highly transactional platform.
- Delivered product presentations to enterprise clients in collaboration with Sales, translating complex distributed system architecture into business value.

Software Engineer

Jul. 2019 – Feb. 2021

Citrix R&D

Bangalore, India

- Developed Web Application Firewall features in *C/C++* across a 10K+ line production codebase; obtained Blue Belt in *Security Ninja* training (C/C++).
- Designed PostgreSQL schema models and complex multi-table *SQL* queries across 5–6 tables; wrote unit tests eliminating 200+ failures; analysed 20+ customer issues via log files and core dumps.

Software Engineering Intern

Jan. 2019 – Jun. 2019

Citrix R&D

Bangalore, India

- Built *Python* REST API test automation framework covering 1,000+ test cases across a multi-product C/C++, Java, Python codebase.
- Contributed production code in 2-week Agile sprints on a 10K+ LOC codebase from week one.

Research Intern

Jun. 2017 – Jul. 2017

ABB

Bangalore, India

- Built PoC for high-throughput sensor data transmission via MQTT (*C++14*), achieving 20× improvement in rates; implemented cross-platform MQTT clients using Apache Thrift with 2 teammates.

OPEN SOURCE

KubeSlice | CNCF Sandbox Project — github.com/kubeslice

Active

- Led architecture, security design (AES-256-GCM, NSM integration, cert-based mutual auth), and full open-sourcing to CNCF Sandbox; LFX Mentor driving external contributor adoption and ecosystem engagement.

EDUCATION

R.V. College of Engineering (RVCE)

Aug. 2015 – Jun. 2019

B.E. Computer Science | GPA: 9.2/10

Bangalore, India

- Relevant coursework: High Performance Computing, Operating Systems, Computer Networks, Linear Algebra

TECHNICAL SKILLS

Languages: Go (Golang), C/C++, Python, Bash, SQL (PostgreSQL), JavaScript

Kubernetes: Operators (Operator SDK), CRDs, Controllers, CNI Plugins, NSM, Helm, Multi-cluster Networking, Kubebuilder

Distributed Systems: Overlay Networking, Event-driven Architecture, Async Processing, Fault Tolerance, Consistency Patterns

Infrastructure: Docker, AWS, GCP, Azure, gRPC, GraphQL, REST APIs, CI/CD, GitOps

Observability: Prometheus, Distributed Tracing, Log Analysis, Core Dump Analysis

Frameworks & Tools: Gin, Operator SDK, Kubebuilder, Git, GDB, Vim
